

MacBook Pro 13" Retina Display Mid 2014 SSD Replacement

Replace the solid state drive in a MacBook Pro 13" Retina Display Mid 2014.

Written By: Sam Lionheart

INTRODUCTION

Use this guide to remove or replace the SSD.

TOOLS:

- [P5 Pentalobe Screwdriver Retina MacBook Pro and Air](#) (1)
- [Spudger](#) (1)
- [T5 Torx Screwdriver](#) (1)

PARTS:

- [MacBook Pro 13" and 15" Retina \(Late 2013/Mid 2014\) Solid-State Drive](#) (1)

Step 1 — Lower Case

- Remove the following ten screws securing the lower case to the upper case:
 - Two 2.3 mm Pentalobe screws
 - Eight 3.0 mm Pentalobe screws

Step 2

- Wedge your fingers between the upper case and the lower case.
- Gently pull the lower case away from the upper case to remove it.

Step 3

-  The lower case is connected to the upper case with two plastic clips near its center.
-  During reassembly, gently push down the center of the lower case to reattach the two plastic clips.

Step 4 — Battery Connector

-  If necessary, remove the plastic cover adhered to the battery contact board.

Step 5

- Use the flat end of a spudger to lift the battery connector straight up out of its socket on the logic board.

⚠ Be sure you lift up only on the connector itself, **not** the socket, or you risk permanent damage to the logic board.

Step 6

- ☑ Bend the battery connector up out of the way to prevent accidental contact with its socket during your repair.

Step 7 — SSD

- Remove the single 2.9 mm T5 Torx screw securing the SSD to the logic board.

Step 8

- Lift the free end of the SSD up slightly and pull the SSD straight out of its socket on the logic board.

⚠ Only lift the end of the SSD enough to allow you to pull it out—about 1/4".

To reassemble your device, follow these instructions in reverse order.
